Working student:

Tutor for Ringpraktikum EI

Within the laboratory Ringpraktikum EI, students have to participate in a 4 hours laboratory session with the goal of building an electronic circuit with the breadboard. This circuit implements the encryption of an audio communication between two parties.

Your tasks consists in helping the students building the electronic circuit with the breadboard and going through the theoretical part of the lab with them.

Duration:

1st November 2018 to 28th February 2019 @ 4h/week

Prerequisites:

- Previous experience with electronic circuits construction with the breadboard is preferred.
- Basic knowledge of Linear Feedback Register and Cryptography is a plus.
- Like to work with students and patience in advising them.
